I spoke to David van Buren about your proposal. As it is, he didn't think it would be approved. That's why I sent it back to you.

Tom

Subject: Graduate course development

Tom,

I don't need to get computer experts to explain what encryption is. I used to work with encrypted material in the past. I know what encryption is and how to explain it to students. Why do you question my expertise?

In cyber-security it is important to understand what encryption is as many cyber-criminals use to hide information. Cracking encryption of legitimate sites makes sensitive material vulnerable to ID and credit card thieves.

The syllabus was a first draft, a submission to get permission from grad. council to develop a graduate course. I don't have it all figured out yet as it is a summer project not a spring project. I just needed the ok to work on it this summer.

Sabina
